

Bjarne Østerud, born in Eidsvoll, Norway 1940, is a professor emeritus in Biochemistry, Faculty of Health Sciences at the University of Tromsø, Norway. He studied biochemistry at the University of Oslo and has been employed by the University of Southern California (USC) Medical School and the University of California at San Diego (UCSD) for 8 years before becoming professor in clinical chemistry in 1979 and in biochemistry at the University of Tromsø from 1986. His main research interest has been hemostasis and thrombosis and has published more than 200 papers in the field. He discovered in 1977 the new activation pathway of TF-FVII/VIIa activation of FIX (PNAS 1977) and has accomplished several new discoveries related to platelets, sepsis, and tissue factor expression in blood cells. He is a member of the Council of the International Society on Thrombosis and Haemostasis (ISTH). He has received the Distinguished Career Award from ISTH (1977), and The Norwegian King's gold medal for merit (2006). He is an honorary member of the Norwegian Biochemical Society.
